PROFESSIONAL PROFILE

AWS-certified Software Engineer and entrepreneur with 4+ years of enterprise experience and two active ventures. Bridges deep technical expertise in cloud infrastructure and AI integrations with an MBA-level business perspective. Passionate about building scalable, high-impact systems — from enterprise data pipelines to consumer-facing AI platforms and beyond.

Education

Iowa State University, Ames, IA — Graduated May 2024
Master in Business Administration
Bachelor in Software Engineering
Certifications: *AWS Certified Cloud Practitioner, AWS Certified Developer Associate, AWS Certified Solutions Architect Associate*

Skills

Programming: Proficient in Terraform (HCL), Python, Java, C, and ReactJS; Familiar with Kotlin, C++, Rust, HTML/CSS,
Cloud Platforms: AWS, Azure
DevOps: GITlab, Github Actions, Container Deployments, Single Push Full Stack Software Deployment
Data and ETL: Glue, Hadoop, Spark, Pandas, Matplotlib, SQL, NoSQL
Development Platforms: Android Development, Embedded Systems, Web Development, Full-Stack Development, Cloud Development
Operating Systems: Linux/Unix, Windows
AI/ML: AWS Bedrock, AWS Quick, TensorFlow, Keras, OpenAI API
Drones: PX4, ArduPilot, 5G, Starlink

Work Experience

State Farm Mutual

Software Engineer | July 2024-Present

- Built a RAG-powered AI chatbot using Amazon Quick, automating knowledge synchronization across 5 GitLab repositories and integrating it into an enterprise Vue/TypeScript application.
- Architected Python/Lambda/Glue/SQS pipelines processing thousands of XML policy files monthly, optimizing ETL performance and maintaining 88% test coverage.
- Eliminated cross-region infrastructure drift using Terraform and GitLab CI/CD (OIDC), ensuring parity across production, staging, and development.
- Integrated Bedrock with OpenSearch Serverless for RAG-powered knowledge retrieval, reducing manual QA by 50%.

Software Engineer Intern/Part-time | May 2022-Aug 2023

- Built and embedded personalized AWS QuickSight dashboards on our department react page for 20+ department users
- Deployed a DataDog resource tracking dashboard to monitor AWS spend and usage
- Improved code reusability by creating reusable terraform modules of repeated objects, resulting in a quicker turnover for developers

Project Experience

RDI - Low Latency Global Drone Operation — Mar. 2026-Present
Sole Founder Part-Time

- Architecting real-time global drone control via KVS WebRTC and Starlink-backhauled relays, chosen over AWS Wavelength for resilience to local weather and hostile action.
- Built a serverless AWS backend (API Gateway, Lambda, DynamoDB, Cognito, CloudFront) by reusing my existing Terraform modules and CI/CD, saving several months of development.

Fingov.ai - G2C SAAS Platform — Dec. 2024-Present
Sole Founder Part-Time

- Built and launched a G2C SaaS platform (fingov.ai) that unifies SEC, USAspending, Congress, FEC, lobbying and congressional-trade data. A political campaign manager uses it to shape candidate strategy.
- Engineered parallel agentic AI on Bedrock (Claude via Strands), with session context stored in DynamoDB/S3 to stay under token limits. Infrastructure is serverless AWS (Lambda, SQS/SNS, Step Functions, OpenSearch, Cognito, CloudFront) with glue for scheduled large data flows, built with custom Terraform and GitHub Actions CI/CD with reusability in mind.
